

How to tile onto...

Plaster and Plasterboard (Dry Areas)

1. Either screw the plasterboard to stud frame wall construction at maximum 600mm centres apart, or apply gypsum plaster to block work.
2. Prime the surfaces with diluted Nicobond Universal Bonding Agent and Sealer and allow to dry.
3. Spread the adhesive 3mm deep using a 6mm notched trowel onto the surface to be tiled. Solidly bed tiles into adhesive using slight sliding action. Every so often use a spirit level or straight edge to check that the tiles fixed are flat. Allow to dry to recommended time.
6. Fill the joints between tiles with the recommended grout using a float grouter. Remove surplus grout from the surface with a sponge and smooth the joints with a rounded stick to achieve an even better finish.
5. Ensure movement joint is inserted into internal corners, PVC type or silicone sealant.

*New plaster needs to dry for at least 4 weeks. Tiles to be fixed to finish coat only, never the backing coat. When fixing to Plaster board ensure the boards are rigidly braced and adequately supported, fix directly to the paper face, do not skim with plaster. Weight of tiling not to exceed 32kg/m² on plasterboard and 20kg/m² onto gypsum plaster.
