

# How to tile onto...

## Tile Backer Board on Solid Walls

2. Apply dots of adhesive to the reverse side of the board (max 300mm centres), for additional stability also apply adhesive around the edge of the board.

4. Hammer-In fixings to provide a secure installation of the Tile Backer Board.

Nicobond Hammer-In fixings

1. Ensure the wall surface is free from dust and grease.
2. Using Nicobond Quickfix apply dots of adhesive to the reverse side of the board. A 600 x 2400 x 12.5mm thick board will typically have 12 dots of mortar up to 30mm thick. Ensure outer dots are located at board edges.
3. Place the board vertically on the wall surface and bed firmly into place. Always use a straight edge and level to ensure good alignment.
4. Once the adhesive has set, use the hammer-in fixings to secure the tile backer board. The fixings to be positioned so as to be hammered in through the middle of the dot of adhesive.
5. The joints between boards should be taped over using either Nicobond Jointing Tape for dry areas or Nicobond Wet Room Waterproof Tape and components for wet areas.
6. Spread the recommended adhesive over the surfaces and fix new tiles using the notched trowel or solid bed method as appropriate.
7. Fill the joints between tiles with the recommended grout using a float grouter. Remove surplus grout from the surface with a sponge and smooth the joints with a rounded stick to achieve an even better finish.

\* The dot and dab fixing system is not recommended for use with boards less than 12.5mm thick. For the thinner boards, using a notched trowel apply a solid bed of adhesive over the board surface and press firmly into position.
