

# How to tile onto...

## Cement Screed or Concrete using Large Format Tiles

5. Nicobond Professional  
Levelling System

1. Ensure cement screed surface or concrete floor is fully cured, flat, clean and free of grease before commencing.
2. If the floor is porous, prime the surface with diluted Nicobond Primer (*ratio 4 volumes of water to 1 volume of Nicobond Primer*).
3. Apply a layer of adhesive from 4mm up to 30mm thick onto the base using the Nicobond Large Format Round Notched Trowel.
4. Place the tiles into the wet adhesive using a slight sliding action to ensure solid bedding of the tiles.
5. The Nicobond Professional Levelling System should be used to ensure tiles are flat and level.
6. Fill the joints between tiles with the recommended grout using a float grouter. Remove surplus grout from the surface with a sponge and smooth the joints with a rounded stick to achieve an even better finish.

\* Allow at least 6 weeks for structural concrete floors to cure and further 3 weeks for subsequently applied screed. In the event that a rapid setting cement replacement is used the drying time of screed will be greatly reduced. Refer to the Technical Team for further information.
