

# How to tile onto...

## Solid Construction Walls and Floors using Waterproof Tanking System

1. Ensure cement screed surface or concrete floor is fully cured, flat, clean and free of grease before commencing.
2. If the floor is porous, prime the surface with diluted Nicobond Primer (*ratio 4 volumes of water to 1 volume of Nicobond Primer*).
3. Insert the Premier Shower Deck into position or lay screed to appropriate fall. Make connections for drainage.
4. Fit the self adhesive Nicobond Wet Room Waterproof Large Collar to seal the joint between the drain and the Premier Shower Deck.
5. Start with internal corners, wall and floor junctions, joint between Premier Shower Deck and screed, install the self adhesive components, these can be overcoated with Nicobond Wet Room Waterproof Membrane and allow to dry.
6. Using a medium roller, apply the first coat of membrane to wall and floor. It is not necessary to coat the Premier Shower Deck (only around the drain collar) as it is waterproof. Allow to dry.
7. Apply the second coat of membrane over walls, floors and wet room components to ensure a good seal is achieved. The optimum thickness of the membrane to be minimum 0.6mm for the two coats. Allow to dry for at least 2 hours before commencing tiling.
8. Apply a layer of the recommended adhesive and press tiles with slight sliding or twisting action.
9. Fill joints between tiles using the recommended grout.
10. Insert movement and perimeter joints to internal corners and at wall and floor junctions.

\*Allow at least 6 weeks for structural concrete floors to cure and further 3 weeks for subsequently applied screed. In the event that a rapid setting cement replacement is used the drying time of screed will be greatly reduced. Refer to the Technical Team for further information. New plaster needs to dry for at least 4 weeks. Tiles to be fixed to finish coat only, never the backing coat. Weight of tiling on gypsum plaster should not exceed 20kg/m<sup>2</sup>.
